Software Engineering student at Afeka College, specializing in AI. I love solving problems and building software that helps people in the real world. A great example of this is CityScan, a platform I'm developing to help municipalities manage data and report hazards more easily. I've built a functional Full-Stack demo using React and Node.js to show exactly how the system works, turning the initial idea into a simple and easy-to-use application.

EDUCATION

B.Sc. Software Engineering, Afeka College of Engineering | Current GPA: 87 | 2023 – Present
Full Matriculation Diploma, Leo Baeck Education Center | 5 units in Mathematics and English, advanced studies in Chemistry and Geography | 2015 – 2018

PERSONAL PROJECTS

- **CityScan (Urban Hazard Reporting Platform)**
Streamlines communication between citizens and municipalities through smart hazard management, displaying real-time data on an interactive map with an anomaly detection mechanism. Completed as a working Full-Stack demo, from UI to backend database management.
- **ToDo App (Task Management Application)**
An efficient personal workspace focused on a smooth, fast UI/UX, featuring smart state filtering, real-time search and continuous data persistence. Demonstrates a clean, modern Front-End architecture.

ACADEMIC PROJECTS

- **SmartCollect (Integrative Project – Municipal Waste Collection)**
REST API managing bins, trucks and collection routes with role-based access (Admin, Operator, Driver), atomic command-driven operations and full audit logging. Java, Spring Boot, PostgreSQL, Docker.
[GitHub](#)
- **Mistic Cave (Game Development Course – Unity)**
Rescue a princess taken by a monster: gather coins and diamonds in the cave to earn the sword, then storm the castle and bring her home. Three scenes (village, cave and castle) with branching NPC dialogue, a quest log, melee combat with enemy AI, and progress saved between them. Unity, C#, URP, NavMesh AI and the Input System. [Video](#)
- **Secure Equipment Order System (Cyber Security Course)**
Developed an ordering system with a strong emphasis on secure architecture, including Role-Based Access Control (RBAC), rate limiting, and strict audit logging.
- **2048 Game Clone (C Course)**
Developed a fully functional, terminal-based clone of the classic game in a Linux/Ubuntu environment, demonstrating efficient memory management.

EMPLOYMENT

Security Shift Manager, Haifa Port and Passenger Terminal | 2021 – 2023

- Responsible for ongoing security operations, commanding the security array and managing hundreds of people per shift with rapid decision-making under pressure.

MILITARY SERVICE

Commander and Combat Soldier, Operational Mobility Unit | 2018 – 2021

- Instructed on off-road and armored vehicles in complex terrain, solving malfunctions in real time under pressure, with extensive experience in public speaking and technical instruction.

SKILLS & LANGUAGES

- **Front-End:** React, TypeScript, JavaScript, HTML5, CSS3, Responsive Web Design
- **Back-End & Databases:** Node.js, Python, Java, C, C++, C#, PostgreSQL, MongoDB, Supabase
- **Tools & OS:** Git, Unity, Ubuntu (Linux), Cursor, Claude
- **Core CS:** Algorithms, Data Structures, OOP, Operating Systems, Machine Learning, Parallel & Distributed Computing (MPI, CUDA)
- **Languages:** Hebrew (Native), English (Very Good)
